

## SUMMARY

---

I am a full stack developer and Dev Bootcamp graduate. At Dev Bootcamp, I learned Ruby and JavaScript, as well as frameworks, including AngularJS, Rails, Node, and many others. More importantly, however, I was given the tools to quickly learn new technologies, while maintaining clean code, and following best practices. I also gained experience becoming an effective communicator in an AGILE environment. I am seeking a position in a challenging and stimulating environment, in which I can simultaneously contribute and learn.

## SKILLS

---

**DATA:** SQL, ActiveRecord, Mongoose

**DEVELOPMENT:** Ruby, Rails, Sinatra, JavaScript, Node.js, AngularJS, JQuery, Express, Ionic, HTML/CSS, Git, OAuth, RESTful APIs, JSON, RSpec, Gulp

**OTHER:** Korean, Spanish, NASM Certified Personal Trainer

**SAT SCORES:** Math: 740 (97th percentile), Writing: 660 (93rd percentile), Critical Reading: 630 (87th percentile)

## EMPLOYMENT

---

### Dev Bootcamp

Nov 2014 to Feb 2015 · San Francisco, CA

- 19-week, 1000+ hour program, in which I learned best practices for Object Oriented Programming, MVC and Test Driven Development.
- Developed proficiency in Ruby, JavaScript, and both back-end frameworks (Rails, Sinatra, Node), as well as front-end frameworks (Angular, Ionic, JQuery).
- Practiced pair programming in an AGILE environment, learning git workflow, and how to give and receive effective feedback.

### Sage Elementary School

English Teacher · Jan 2013 to Aug 2013 · Jeju, South Korea

- Managed, motivated, and led classrooms of over 20 students.
- Organized and coordinated events for students.

## EDUCATION

---

### University of Wisconsin - Madison

B.S. Economics 2012

### Sogang University - Seoul, South Korea

10-week, 200 hour Korean language course, developing conversational Korean fluency

## PROJECTS

---

### CloudScript

- Integrated platform for doctors to videochat with patients, allowing for electronic prescriptions to be delivered within 90 minutes via postmates.
- Utilized io.js, MongoDB, Firebase, and WebRTC for the back-end, and AngularJS and Ionic for the front-end. Deployed on AWS.

### Midnight Munchies

- Provides users with one-click access to the nearest, open food joints.
- Used multiple APIs, including Yelp and Google Places.
- Utilized Sinatra and ActiveRecord for the back-end, and HTML/CSS and JQuery for the front-end. Deployed on Heroku.

### Sudoku Solver

- A sudoku solver made using Ruby.

### Personal Site

- Personal website, using HTML5, CSS3, and JQuery.
